

Does your organisation rely on RSA Authentication Manager for access to your critical assets from partners, customers, employees and contractors? Are you satisfied with the strong 2 factor authentication but would enjoy easier administration, extended authentication methods (e.g. SMS, Email), flexible deployment and costs savings?

If your answer is yes than the new version of the RSA Authentication Manager 7.1 can provide strong authentication you are used to and add features that were created according to customer requests.

## What benefits will it bring?

Migration to the new version of RSA Authentication Manager builds on the strong authentication of previous versions and adds following features:

- Comprehensive and flexible administration via web interface – zero client footprint
- Lowers cost by providing on demand authentication (SMS, Email)
- Native integration to LDAP, AD (no sync needed – saves time)
- Enhanced business continuity
- Self service mechanism allows users to reset their own PIN by answering a set of security questions
- Can be administered using the windows management console
- Support for administration of SecurID via custom API

## Why shall I migrate?

On top of strong 2 factor authentication you can get enhanced functionality:

Administration via web interface saves time for the IT staff. Self service - mechanism allowing users to reset their PIN without wasting their time in queues at the helpdesk, saves money.

SMS, Email capability allows on demand authentication so contractors and remote workers can authenticate without engaging in the slow process of token issuing.

An option to temporarily expand your Authentication Manager license, in case of a disaster or a business disruption, supports your business continuity plan.

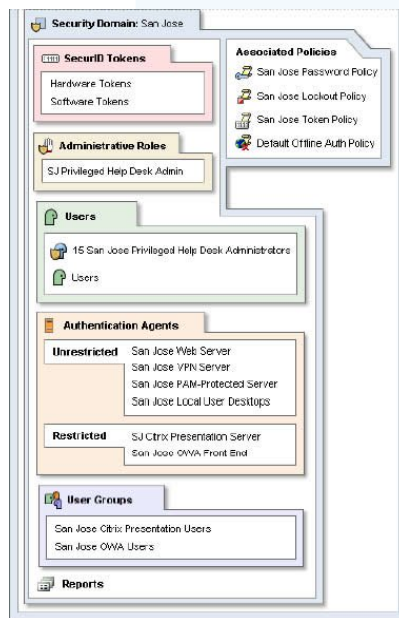

## Why iTrust?

Our consultants are ex-RSA, can support you with professional expertise building upon large portfolio of successful deployments - securing critical assets in multi-OS environment and layered architecture. On top of our expertise iTrust is currently the only RSA partner that can help you migrate to the new version of Authentication Manager - 7.1.

For a free consultation please call: 0845 057 3333

## Migration Benefits

- Business continuity
- Cost savings
- Flexible remote administration
- Native integration with LDAP, AD
- Increased scalability and performance
- Zero client foot-print
- Easy administration via web interface
- SMS, Email on demand authentication
