

The need to swiftly and effectively act on security challenges and address compliance regulations has never been greater, yet expanding enterprise networks and data traffic produces exponentially increasing log file volume.

iTrust Security Ltd. using enVision provides the power to gather and analyse log data from any IP device, in computing environments of any size, without filtering and without the need to deploy agents. Our consultants will help you to capture and store all the event data and audit logs from the network, security, host, application and storage layers of the enterprise and transforms this information into valuable intelligence.

What can iTrust do for you?

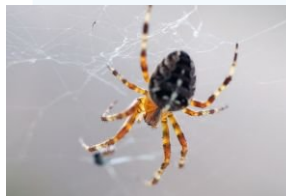

**Transparent access control enforcement:** Who is accessing my data?

As the only solution on the market capable of collecting 100% of your log data iTrust using Envision provides detailed access information allowing for monitoring real time activity to mitigate risk.

**Correlated threat detection:** What is happening in my network?

Using smart correlation engine mountains of seemingly unrelated data are turned into intelligible patterns of information allowing to act before an attack even started.

**Event explorer:** How do I manage all these alerts?

Event explorer provides a centralised, global view of what is happening within your network, immediately alerting you if anything happens that you need to know about!

**Log storage:** How do I store all the logs?

Envision is integrated with EMC storage systems to cost-effectively store and manage this information throughout its lifecycle. Determining and managing the level of risk associated with your information, wherever it resides, allows for business acceleration and corporate growth.

iTrust consultants can help you to achieve compliance and provide your security teams with effective methods allowing you to address risks and swiftly deal with threats.

Envision transfers your log data into intelligence.

**Function:**

- Log Data Collection & Management
- Alerting & Correlation
- Reporting & Analysis
- Incident Management
- Log Storage & Lifecycle Management

**Attributes:**

- Performance, Scalability, Availability.
- Usability & Supportability
- Openness & Integration

**Delivers:**

- Access control enforcement
- Real time monitoring
- Correlated threat detection
- User monitoring
- Automatic compliance reports
- Real-time compliance enforcement
